Objective

DevOps/Cloud engineer from École 42. Owned Alan's full migration to Cloudflare Workers. 10 years of team leadership in high-pressure environments. Passionate about automation, IaC and observability. Open to work-study DevOps/Cloud role.

Skills

- Cloud & Infrastructure:** AWS, Cloudflare (Workers, Zero Trust, KV, DNS), Docker, Swarm, Kubernetes, Infrastructure as Code (Terraform, Terramate, Ansible), Networking (Load Balancer, Traefik, Overlay Networks, OSI/TCP/IP/ICMP)
- DevOps & Automation:** Monitoring (Prometheus, Grafana, Loki, Alloy/Promtail, Alertmanager, Datadog), CI/CD (GitHub Actions, Argo CD, Trivy), Git/GitHub, Scripting (Shell/Bash, Python, TypeScript, YAML, Taskfile)
- System Administration:** Linux/Unix (Debian, Ubuntu), Databases (PostgreSQL, Redis), Nginx, Security (SSL/TLS, container security, least-privilege access), Backup & Disaster Recovery
- Development:** C/C++, YAML, Python, Shell/Bash, HTML/CSS/JavaScript/TypeScript
- Tools:** Claude / Claude Code (harness/skills/automation/multi-agent), Figma (UI/UX), Notion, Git, Visual Studio Code
- Soft Skills:** Process optimization, Problem-solving under pressure, Cross-cultural collaboration, Self-motivated, Attention to detail, Team leadership, Incident & SLA management

Professional experiences

- DevOps / Cloud Engineer - Internship**
Alan: Health insurance - Paris, France | Mar 2026 - Sep 2026
Stack: Cloudflare (Workers, Wrangler, Zero Trust, KV), Terraform, Terramate, GitHub Actions, TypeScript, Datadog, Bash
 - Led the full migration of Alan's web platform (19 apps, ~39 Terraform stacks, all environments) from Cloudflare Pages to Workers, with zero customer-facing downtime, including alan.com (62M requests / 30 days).
 - Built new CLI commands and a dynamic Cloudflare KV resolver, standardizing Worker deployments across all apps and CI (GitHub Actions) while ensuring coexistence with the legacy Pages setup.
 - Authored the cutover/rollback runbook adopted by the crew, standardizing safe production migrations; resolved a live production DNS incident end-to-end (detect, rollback, freeze).
 - Executed cutover, reconcile-to-IaC and decommission, using canary routing and tested rollbacks.
- Co-Founder, Infrastructure Lead & DevOps Engineer**
Glasck: Esport Platform - Paris, France | May 2025 - Ongoing
Stack: Docker Compose, Swarm (staging), Traefik, Redis, PostgreSQL, Prometheus, Grafana, Loki, Alloy, Taskfile
 - Architected production infrastructure: 16 containers stack (full observability: Prometheus, exporters, Grafana, Loki), achieving 99.5% uptime on constrained budget
 - Implemented monitoring and automated deployments: reduced MTTR from 45 min to <10 min via alerting, cut deployment time from 15 min to 3 min with Taskfile automation, enabling faster incident response
 - Built Docker Swarm staging: automated rolling updates, rollback strategies. Evaluating Swarm vs K8s for migration
- Discovery Internship - Software Development & UI/UX Design**
Dassault Systèmes: Software Developer - Vélizy, France | Apr 2024
 - 1-month immersion in enterprise software development: observed CI/CD pipeline workflows and Agile methodologies.
- Pastry Chef – Pastry Cook – Chocolatier**
Lenôtre, Plaza Athénée, La Maison du Chocolat, Bistro Guillaume - France & Australia | Sep 2011 – Aug 2021
 - Led teams of 3–6 in high-pressure environments, mentoring staff and streamlining workflows while handling incident management during critical service (200+ covers/day)
 - Managed an international team in Australia (1 year), adapting communication style to a cross-cultural environment.

Projects

- AWS Infrastructure Automation (IaC) - with AWS, Ansible & Terraform**
 - Deployed AWS infrastructure with Terraform: VPC, Security Groups, EC2 instances, IAM roles
 - Automated configuration with Ansible: system setup, app deployment
- Kubernetes & GitOps Pipeline - with Kubernetes (K3s/K8s), Argo CD, CI/CD**
 - Setting up K3s/K3d clusters with Argo CD workflows: automated deployment and sync from Github repository, application version management (Docker tags), drift detection, multi-namespace architecture
 - Implementing Ingress for host-based routing, services for inter-pod communication, application replicas, and learning container orchestration fundamentals (pod scheduling, networking with CNI/Services/Ingress)

Education

- École 42, Paris | 05/2024 - 08/2025: *Common Core validated*
- EPMTTH, Paris | 09/2011 - 07/2015: *Professional Training (CAP & BAC): Bakery, Pastry Making, Chocolate Making*

Language

- French

English

Spanish
- Native

Fluent (C1/C2)

Intermediate (B1)
